

Crystal Healing Course

What are crystals and how do they help us?

Crystals are shiny rocks that are found in nature. For ages humans have been attracted to crystals because of their beauty. Most crystals come from the Quartz family. Quartz is more than 20% of the Earth's crust. Crystals are an integral part of nature and possess some of the healing properties of nature. We experience this natural soothing effect when we walk bare feet on sand or sit close to a water body. People who use crystals experience a similar kind of soothing energy when crystals are placed near them.

Quartz displays the special property of piezoelectricity; it converts mechanical energy into electric current. Human bones also display piezoelectricity. And, humans also have an electromagnetic field around their body. Doctors use ECG, EKG, EEG, MRI, etc. to study this field and diagnose disease. Crystals, owing to their special properties are able to influence the electromagnetic field around our body in such a way that we feel relaxed and harmonious after using them.

What is taught in crystal healing class?

In a crystal class, the crystal master performs an attunement procedure (energy transmission) which helps the student's body to be more receptive to crystal energies. And we learn how to:

1. Program the crystals as per your desire
